

“The most interesting people you’ll find are ones that don’t fit into your average cardboard box. They’ll make what they need; they’ll make their own boxes.” Dr. Temple Grandin

Low-Tech Perceptual Supports for People with ASDs

Location: 97 Main Street, Hamburg, NY 14075

Date: March 31, 2016

Time: 6:00_{pm} – 8:00_{pm}

People with autism spectrum disorders often process external stimuli differently than neuro-typicals. Deb Kroetsch knows this better than most. As an adult with Asperger’s, she is keenly aware of how the environment affects her. Sensory overload and shutdown causes her real psychological pain; feeling like going into emotional shock, followed by grieving. This workshop will provide an overview of some low-tech supports, designed and built by Deb herself, that provide the defense system she needs to protect against sensory overload. You will come away with a better understanding of how sensory overload can affect someone with autism, and ideas for how to protect against it.

Please RSVP with Sara Spaulding at sspaulding@autism-services-inc.org or 716-992-0131

We look forward to seeing you!
